

# Segments and Segment Properties

This tutorial explains how to work with segments and segment properties.

## 1. Draw a few segments.

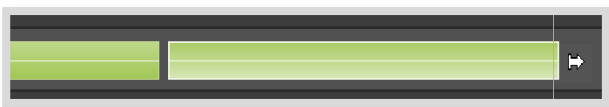

2. Click on a segment to select it. The currently selected segment is highlighted, and the property window displays its various settings.

Different tracks have different segment properties.

3. To change the position of a segment, drag the segment to the left or to the right.

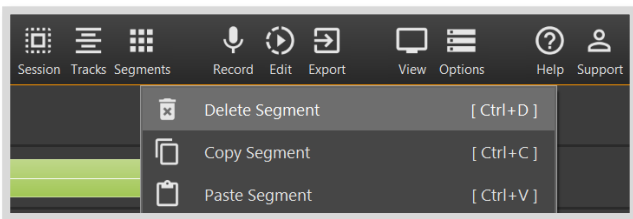

To change the size of a segment, point with the mouse cursor near one edge of the segment and drag the mouse to the left or to the right.

4. To delete a segment, first select the segment by clicking on it.

Click the “Segments” button in the top toolbar. Then select “Delete Segment”.

**Shortcut:** Press “Ctrl+D” on the keyboard.

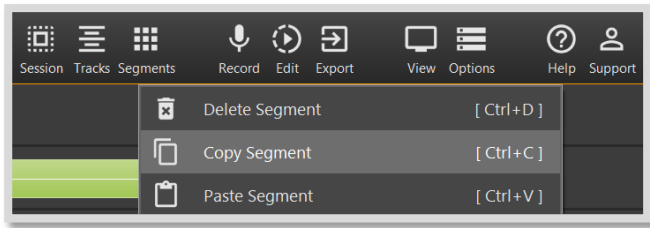

5. The Copy and Paste commands enable you to copy the content of one segment to another.

Click on the source segment to select it.

Click the "Segments" button in the toolbar. Then select "Copy Segment".

**Shortcut:** Press "Ctrl+C" on the keyboard.

To paste the segment, click the target segment. Then select "Paste Segment".

**Shortcut:** Press "Ctrl+V" on the keyboard.

Note: You can copy and paste segments between different sessions. Open two windows of SHARM Studio, each with a different session, to quickly copy segments from one session to another.
